

Waterproof Liner

The Waterproof Liner is a multifunctional cardboard base paper developed by Nippon Tokai Industrial Paper Supply.

It is highly waterproof, and by devising the shape of the box, it is possible to transport products packed in ice in the same way as styrofoam. In addition, cardboard can be folded to make packaging smaller and more compact, saving space when storing before and after use, and improving transportation efficiency.

Contribution to Achieving SDGs through Products

- ● Products that make maximum use of diverse technologies and know-how, contribute to reducing the amount of petroleum-derived raw materials used, and to reducing GHG emissions by improving transportation efficiency
- ● Contributes to reducing marine plastic litter
- ● Uses cellulose obtained from sustainably managed forests
